**WE CAN MEET EVEN THE
CHALLENGING MISSION
BRING US YOURS.**

RAMPART
WE EQUIP YOUR MISSION

WE EQUIP YOUR MISSION

Rampart is Canada's leading single source provider of **operational equipment**. We offer access to the largest selection of products and brands, world-class subject matter experts, and industry-leading customer service.

SUPPORTING OPERATIONAL REQUIREMENTS SINCE 2010

EQUIPMENT SOLUTIONS

Our experts are committed to serving the end-user with the world's best products. If you're unsure of what you need, our experts work with you to find the right solution.

CUSTOMER SERVICE

Our top priority is to provide the highest level of customer service. Our team is dedicated to providing on time, on budget, on target solutions.

SUBJECT MATTER EXPERTS

We have subject matter experts who can help and assist every step of the way. From initial request, to post-contract delivery, warranty, repair and anything else that might come up.

WHO WE SERVE

- ✓ **Military** *All branches*
- ✓ **Police** *Federal, provincial & municipal*
- ✓ **Corrections**

GLOCK

BY THE NUMBERS

WE BREAK DOWN THE NUMBERS BEHIND THE #1 MOST TRUSTED FIREARM USED BY LAW ENFORCEMENT AND ARMED GOVERNMENT AGENCIES IN CANADA

THERE ARE

135

AGENCIES IN CANADA USING GLOCK PISTOLS.

OVER

50,000 +

GLOCK PISTOLS CURRENTLY IN USE BY CANADIAN AGENCIES.

USED BY APPROX.

85% +

OF ARMED AGENCIES IN CANADA.

IN THE FIELD SINCE

1993

WITH SOME OF THE FIRST PISTOLS SOLD STILL IN SERVICE TODAY.

PART COMMONALITY

50% +

BETWEEN POPULAR FULL & COMPACT 9mm GLOCK PISTOLS, AND 80%+ COMMONALITY BETWEEN G45 & G19 GEN5

GLOCK IS THE

#1

PREFERRED PISTOL FOR ARMED AGENCIES IN CANADA.

DE-ESCALATING ON THE FRONT LINE WITH 40MM PROJECTILE LAUNCHERS

Safety, accuracy, and cost-effectiveness differentiate this new tool

Law Enforcement in Canada and the United States are adopting a highly successful new method for safely de-escalating high risk situations by using impact rounds fired from a 40mm launcher. The launchers are being used as a complement to the standard Conducted Energy Weapons (CEW), also known as TASERTM weapons carried by law enforcement professionals every day around the country. The 40mm launcher and impact rounds (see image below) provide Police users with a dramatically improved ability to safely address threats at longer range. 40mm systems and ammunition are cost effective to acquire and maintain. Additionally, they are not subject to the same situations that can cause CEW weapons to fail.

A 40mm single shot launcher and impact round from Defense Technology. A 40mm launcher is a special-purpose firearm designed to launch 40mm projectiles. 40mm projectiles are low velocity rounds available in a variety of payloads.

A major limitation of a CEW is its maximum effective engagement range of 10 meters. 40mm projectiles by contrast have an effective range of 40 meters. By extending this range of less lethal capabilities, Police users no longer need to be in such close proximity to their subject. This not only reduces risk to the Police user, it also reduces the potential for a physical altercation where use of deadly force becomes necessary. Police users can establish a safe distance, work to develop lines of communication and increase the chance of a peaceful resolution.

The launcher's force is the equivalent of getting struck by a baseball traveling about 65 kmph, or the speed of a ball thrown by a little leaguer, meaning that, if it must be used, the most likely injury a person could sustain from the launcher is bruising, swelling and physical discomfort.

"The more we can get these less-lethal rounds in the hands of our officers, the less likely that bad scenarios will continue to deteriorate to the point where the only option left is lethal force," quoted Madison Wisconsin Police Chief Mike Koval in an interview with local paper, the Wisconsin State Journal.

DE-ESCALATING ON THE FRONT LINE WITH 40MM PROJECTILE LAUNCHERS

In many cases, 40mm launchers are replacing 12 Gauge Shotguns that fire bean bag munitions. 12 gauge rounds are less accurate and distribute their energy over a smaller area, increasing the chance of injuring the subject. An additional benefit of the 40mm launcher is that it can be outfitted with accessories, like a red dot optical sight to further improve accuracy.

Another important consideration is cost. The 40mm launcher is far less expensive to operate and train with than a CEW. The service life of a well maintained 40mm launcher could easily exceed 10+ years, this offers a great deal of value and cost savings to any agency. Additionally, 40mm ammunition is readily available from multiple suppliers, cost effective and is purely mechanical with no expensive batteries or cartridges to replace.

The challenges facing frontline professionals have never been more profound. Progressive tools like the 40mm launcher add a safe, efficient, and cost-effective option for Canadian Police users.

40MM SINGLE SHOT LAUNCHER

The 40LMTS is a tactical single shot launcher that features an expandable ROGERS Super Stoc and an adjustable Integrated Front Grip (IFG) with light rail. The ambidextrous Lateral Sling Mount (LSM) and QD mounting systems allow both a single and two point sling attachment. The 40LMTS will fire standard 40mm less lethal ammunition, up to 4.8 inches in cartridge length. The Picatinny Rail Mounting System will accept a wide array of enhanced optics/sighting systems.

MINIATURE RED DOT SIGHTS FOR GENERAL DUTY POLICING

The benefits that police are seeing by adapting this modern technology

Miniature Red Dot sights (MRDS) on pistols are quickly being adapted by forward-thinking law enforcement agencies who are discovering the range of benefits offered by adding an optic to a duty pistol. As more data is published, mounting evidence clearly shows that MRDS enhance the safety and accuracy of law enforcement pistols, improve situational awareness and are more effective when used in high stress situations.

The AIMPOINT ACRO-P2 (pictured above) is a popular example of Miniature Red Dot Sights (MRDS) being adopted by modern law enforcement.

MRDS have been used by special operations forces, tactical teams, and in competitive shooting sports for years. Now with further advancements in durability, battery life, duty holster compatibility and OEM duty pistol compatibility (GLOCK MOS), MRDS have quickly become a viable option for general duty use. As more agencies begin to adopt MRDS optics, the true benefits to usability and police user safety are becoming very apparent.

“In addition to accuracy advantages, MRDS are able to better compensate for physiological responses during high stress situations.”

When the human body is subject to stress, the Sympathetic Nervous System (SNS) initiates a variety of responses that prime the body to defend itself or escape danger. One of the first activations by SNS is to the eyes: our field of vision is increased to its maximum, pupils are dilated to intake more visual information, and the Ciliary muscles (the ring of muscles that surround the lens of the eye) contract, which thickens the lens for better distant focus.

This reaction has served a critical role in mankind's survival throughout history, but when operating a firearm, it can make it extremely difficult to find your sights and acquire sight picture under extreme stress or spontaneous threat¹. When using an MRDS, your eyes are able to remain in a more natural and open state, which allows for less reliance on 'fine' focus, ultimately better compensating for these involuntary physiological changes. The wider and clearer target picture allows for a much easier sight to acquire under stress.

A comparison between an MRDS sight picture and traditional irons.

Predictably, the human brain also has its own reaction to a stress response triggered by our SNS. Under extreme stress our brain modifies the way it takes in information. Specifically, it prioritizes the volume of information taken in over the accuracy of the information taken in². Under high stress, our brains cannot process as much detail in the visual data it takes in, which can cause the mind to make presumptive leaps, or 'fill in the blanks'³. This is especially true in low-light scenarios⁴. The human brain can incorrectly complete a pattern or misinterpret an object, like mistaking a floor lamp for a person, or a cellphone for a pistol. This can present an extremely dangerous scenario where police users can make a 'mistake-of-fact-shooting', where the police user makes an honest mistake where they believed that use of lethal force was justified. MRDS with their wider focal plane and bright powered red dot allows the police user to greatly increase the amount of information they are able to take in about their surroundings while retaining sight picture. This additional situational awareness can mitigate some of the presumptive thinking our brains are prone to under extreme stress. In moments where quick decisions need to be made, having additional visual data available to the police user can help make better, more informed decisions and improve both situational awareness and accuracy under stress.

These are just some of the ways MRDS can help police better protect the public with technology. As more and more agencies adopt MRDS, and as more data is released, the benefits of an MRDS for both public and police user safety are becoming common knowledge. Their improvements to accuracy, benefits to situational awareness, and better compensation to our physiological responses to stress present a clear advantage over traditional pistol iron sights.

RAMPART offers a complete line of MRDS optics, as well as other pistol attachments and ammunition.

MRDS have already been adopted by many agencies across Canada and the United States to great effect. Similarly, agencies are also converting to MOS Pistols in the event they choose to adopt MRDS in the future.

ACRO P2

3.5 MOA - RED DOT REFLEX SIGHT

- 3.5 MOA dot size
- 50,000 hours (over 5 years) of operation on one battery
- 4 night vision compatible settings and 6 daylight settings
- Weight 60 g (2.1 oz) sight only
- Submersible to 35 meters (115 feet)

NO SUCH THING AS A ROUTINE CALL: SCENARIO BASED TRAINING FOR LAW ENFORCEMENT

One of the primary goals for any modern police force is to provide realistic, effective training that prepares officers for real-world situations. This is critically important not only for officer safety, but also for maintaining public trust.

There are a number of different ways that police forces can achieve this goal. One particularly effective approach is situational role-playing; which is training designed to produce an authentic, safe and dynamic replication of the operational environment. This type of reality-based training is being quickly adopted by law enforcement agencies to help officers hone their skills and develop better judgment when faced with real-world situations.

“Unrealistic training leads to unrealistic expectations and unrealistic expectations are deadly on the street.” – Jeff Chudwin

ACTION & DECISION MAKING UNDER STRESS

Ballistic training rounds and scenario based training can test law enforcement users in stressful and rapidly evolving situations that can span the entire use of force continuum. Stress on the trainee can be increased through the actions of role players and through the perceived potential for pain if shot with a ballistic training round. Ballistic training rounds, while remaining non lethal, are painful to be struck with and can leave welts or break skin. This potential for pain further drives the effectiveness of the training, because a fear of getting hit with a ballistic training round can influence police users to change their tactics and exhibit behaviours they may not otherwise show in a more controlled environment.

When adrenaline is up and users are being brought into these simulated encounters, weaknesses in training are quickly exposed. Skills that are not conditioned to the level of unconscious proficiency are revealed, and in the end this pressure results in a much more effective and applicable training experience.

PROTECTION PROTOCOLS & STANDARDS

Stress induced by role players and the pain penalty of getting hit is part of the training realism, but the participants must be responsibly protected from any serious damage. The head, face and neck are specific areas that require full protection, both from projectiles and from bump impacts. There have been many reports of serious injuries to police users wearing insufficient training equipment, or undisciplined use of gear during force-on-force training. Something as simple as lifting a visor to wipe away fog has in the past resulted in the loss of an eye for one law enforcement user.

LOW PROFILE PROTECTION FOR LAW ENFORCEMENT

The Discreet Deployment System (DDS) is the next generation in personal protective equipment for Law Enforcement. The DDS uses D3O® padding for exceptional blunt impact protection, in a light weight, breathable jersey that can be worn under your uniform.

FEATURES

**LOW
PROFILE**

**FULL FREEDOM
OF MOVEMENT**

**MOISTURE
WICKING**

**REMOVABLE
PADS**

**PROTECTED BY
D3O®**

**FR MODELS
AVAILABLE**

MODERN POLICING. MODERN PROTECTION.

The Discreet Deployment System fits underneath the uniform which results in a low-profile silhouette. This gives users full blunt impact protection while creating a less aggressive presentation in crowd control situations. End Use Applications include:

- ✓ LAW ENFORCEMENT
- ✓ PUBLIC ORDER
- ✓ UNDERCOVER
- ✓ CORRECTIONS
- ✓ CLOSE PROTECTION
- ✓ SEARCH & RESCUE
- ✓ MOUNTED POLICE

THE PROTECTION TO SERVE.

DEFILADE DDS is protected by D3O®'s ground-breaking impact technology. D3O® produces the thinnest, most advanced protection against impact and blunt force trauma.

THE DANGERS OF LEAD EXPOSURE IN LAW ENFORCEMENT

Lead exposure in law enforcement is a dangerous and often overlooked threat to police users. At the shooting range it is standard for police users to wear hearing protection and eye protection, but far too often, insufficient precautions are being taken to mitigate lead exposure. With the frequency of firearm training, officers (and subsequently their families) can be exposed to lead on a consistent basis due to the “take home” nature of lead. Lead can remain on your hands and clothes long after your range session and become a continuous source of exposure if not properly cleaned.

LEAD EXPOSURE REVEALED AFTER USING D-LEAD TEST KIT

LEAD EXPOSURE AT SHOOTING RANGES

A review of lead exposure at shooting ranges was published in the National Library of Medicine, where they examined 36 studies on lead exposures at shooting ranges [1]. The studies primarily focused on before-after comparisons of shooters, particularly shooters in law enforcement and military. The review concluded that nearly all of the participants in the 36 studies had elevated blood lead levels (BLL) above what is considered safe by the CDC and NIOSH. The average BLL among adults is 0.92 micrograms per decilitre ($\mu\text{g}/\text{dl}$)[2]. Blood lead levels above $5\mu\text{g}/\text{dl}$ is the case definition for an elevated blood level. Full results can be see on the chart below. As your body processes lead in the bloodstream, your BLL's will naturally go down, but consistent and sustained exposure combined with BLL's above $5\mu\text{g}/\text{dL}$ is where health complications from lead poisoning occurs.

33% OF PARTICIPANTS SHOWED BLOOD LEAD LEVELS BETWEEN $10\text{-}20\mu\text{g}/\text{DL}$

ASSOCIATED HEALTH RISKS

- Decreased kidney function
- Increased blood pressure
- Increased risk of hypertension
- Increased risk of tremors
- Decreased cognitive function
- Decreased hearing
- Increased incidence of ALS

51% OF PARTICIPANTS SHOWED BLOOD LEAD LEVELS ABOVE $20\mu\text{g}/\text{DL}$

ASSOCIATED HEALTH RISKS

- Anemia
- Migranes
- Delayed reaction time
- Paroxysmal extreme pain disorder
- Mood disorders
- Difficulty concentrating
- Slow motor nerve conduction

Lead dust lingers in the air and collects on shooters' hands and clothing. There are many factors that can help reduce lead exposure at shooting ranges, including respirators, suppressors, and improved ventilation. However, lead that remains on skin or clothing can be both ingested and inhaled by eating, rubbing your nose, mouth, or eyes without properly cleaning your hands. When it comes to removing lead from your hands and clothing, regular soaps and detergents are not sufficient.

THE MOST COMMON WAYS LEAD CAN GET ABSORBED INTO YOUR BODY:

INHALATION

EATING

TOUCHING FACE

CLOTHING

Why is just washing your hands with regular soap and water not sufficient? Lead is difficult to wash off. Lead is heavy, sticky, difficult to wet and holds a static charge. All these factors make it adhere strongly to your skin, clothes, shoes, and gloves. Lead reacts with most soaps to form a soap scum, where instead of washing off the lead, you end up gluing it to the surface you are trying to clean. Typical skin cleaners only remove between 30-70% of lead from the skin. Long-term understanding of lead exposure and the increase in reported lead poisoning cases amongst law enforcement have led to companies like ESCA Tech to develop their line of lead cleaning products that remove over 98% of lead from the skin/clothes. Rampart can work with your agency to find the best lead mitigation products for your needs.

RECOMMENDED LEAD CLEANING PROTOCOL:

- ✓ Clean hands with lead wipes or soaps after shooting
- ✓ Always clean hands before eating, avoid touching eyes/mouth/nose until you can clean your hands
- ✓ Clean firearms and exposed surfaces with surface wipes or cleaners
- ✓ Wash clothing/uniforms with lead detergent
- ✓ Shower after heavy range session with body wash

D-Wipe Towels are a convenient, portable way to clean lead residue from the hands, arms, face and body.

CEW TESTING CHAMBER

The Rampart CEW Testing chamber allows CEW users to conduct daily function tests, scheduled downloads or test malfunctioning cartridges safely and effectively.

FEATURES:

- ⚡ Probes from accidental discharges are captured and contained within the testing chamber.
- ⚡ The chamber decreases decibel output by over 50%, reducing disruptions to other staff during monthly downloads.
- ⚡ The operator can visually see the arcing during testing without needing to look directly at the CEW, protecting the user.
