CANADA'S LEADING SUPPLIER OF OPERATIONAL EQUIPMENT

WE EQUIP YOUR MISSION

Rampart is Canada's leading single source provider of **operational equipment**. We offer access to the largest selection of products and brands, world-class subject matter experts, and industry-leading customer service.

EQUIPMENT SOLUTIONS

Our experts are committed to serving the end-user with the world's best products.

If you're unsure of what you need, our experts work with you to find the right solution.

CUSTOMER SERVICE

Our top priority is to provide the highest level of customer service.

Our team is dedicated to providing on time, on budget, on target solutions.

SUBJECT MATTER EXPERTISE

We have subject matter experts who can help and assist every step of the way.

From initial request, to post-contract delivery, warranty, repair and anything else that might come up.

WHO WE SERVE

- ✓ **Military** *All branches*
- ✓ **Police** *Federal, provincial and municipal*
- ✓ **Corrections**
- ✓ **Wildlife & Conservation**
- ✓ **Armed Government Services**
- ✓ **Public Safety & Security**
- ✓ **Wildland Fire**

Rampart is proud to be the exclusive provider of GLOCK firearms to Military and Law Enforcement in Canada.

WE CAN MEET EVEN THE MOST CHALLENGING MISSION REQUIREMENTS. BRING US YOURS.

A SERIOUS ARSENAL FOR SERIOUS PROFESSIONALS

→ **Tactical Medical Solutions® Inc. was formed to develop quality, effective supplies and equipment for combat and tactical medicine.** We knew what worked for us in that environment and wanted to share it with as many people as possible. **Our products reflect our experience, situations we have faced and friends we have lost.** Our goal is to prevent others from experiencing those losses by offering equipment that allows them to **operate more efficiently and effectively.** Minimizing preventable death in a combat or tactical environment is a realistic and attainable goal and we are proud to offer products that will help you reach it.

→ **All of our employees are former tactical medical professionals** or have a close relationship with them. We maintain close ties with some of the most elite and experienced medics in the world and every one of our products must pass their evaluation before we put our name on it.

→ Tactical Medicine Education

As a leader in tactical medicine, Tactical Medical Solutions® also provides educational resources on their Educational Portal. Please view the latest ideas in tactical medicine at: <http://www.tacmedsolutions.com/blog/>

The SOF® Tourniquet Generation 4 (SOF®TT-W) is a true generational upgrade to the most effective windlass tourniquet on the market featuring 4 key upgrades:

**SOF® TOURNIQUET GEN 4**

Color/BLACK ●

Part Number: SOFTT-W
NSN Number:
6515-01-587-9943

Color/TRAINER BLUE ●

Part Number:
SOFTT-W-TRN

Color/RESCUE ORANGE ●

Part Number:
SOFTT-W-R

Color/RED ●

Part Number:
SOFTT-W-RC

Color/TAN ●

Part Number:
SOFTT-W-TAN**The SOF® Tourniquet GEN 4 features:****1 Retention Clip**

The Retention Clip helps to secure the windlass by locking it in place once the tourniquet has been applied. This is especially helpful for one-handed applications, resulting in faster application times and doubling the security of the device in combination with the tri-ring during patient movements.

2 5.5" Windlass

The increase in length eases the process of securing the windlass into the clip and tri-ring, increasing the effectiveness of the dual retention system. It still maintains its distinct conical ends while being machined from a single piece of aircraft-grade aluminum bar stock and anodized to minimize the product's signature in a tactical environment.

3 Quick-Compression Buckle

The Quick-Compression Buckle, added to the tourniquet last year, allows for smoother buckle manipulation due to its rounded edges. This also allows for easier one-handed application and overall faster application time.

4 Reinforced Material

Yes, we found a way to make the strongest tourniquet even stronger.

Available for purchase on GSA.

US PATENT: 8,303,620 and D649,642 and 7,776,064

- Each tourniquet ships with two UV resistant black rubber bands for mounting to your individual equipment.

**IT'S ALL IN THE DETAILS:**

The SOF® Tourniquet Gen 4 is built upon its original ruggedness and durability, which was the result of an exhaustive 24-month research initiative compiling end-user research and laboratory studies. The tourniquet is comprised of high-strength, lightweight alloy components. Its design allows the tourniquet to slide over a limb or, if the limb is trapped, the tourniquet can be rapidly disconnected and reconnected around the limb without rethreading the strap. With one application method for both the arm and the leg, the Gen 4 is the easiest tourniquet to operate under stress, which can lead to reduced levels of blood loss and ultimately better quality patient care.

The Gen 4 still maintains its true 1.5" tourniquet strap, providing a wider compression pattern than most standard tourniquets or tourniquets with a 1" constricting band moving through a 1.5" sleeve. The wider compression pattern results in additional arterial compression and increased patient comfort.

Additionally, each tourniquet is shipped with two UV-resistant black rubber bands for mounting to your individual equipment.

The SOF® Tourniquet Gen 4 is one of only two windlass tourniquets approved for use by the Department of Defense, one of only two windlass tourniquets approved for use by the Committee on Tactical Combat Casualty Care, and the tourniquet of choice for the American Red Cross. It is used by everyone from elite military operators around the world to the largest police departments in the country to fire and EMS paramedics on the streets to civilians in everyday public places just trying to be prepared.

These customers chose the SOF® Tourniquet because it was the best option on the market. And now, **the best tourniquet just got better.**

→ The **SOF[®] Tactical Tourniquet** is one of the top performing tourniquets currently available. It is the tourniquet of choice for many of the world's most elite and experienced warriors who have selected it for its outstanding ability to control severe bleeding, high level of reliability and ease of application. While some military units have replaced their issue tourniquets with the SOF[®]TT, other military units have implemented SOP's stating that the SOF[®] Tactical Tourniquet is to be used on all lower extremity bleeds. That means the SOF[®]TT is the tourniquet that's trusted to control the most severe extremity hemorrhage on the battlefield.

The key to successful implementation of a device to be used in a high stress environment is training and ease of use. For law enforcement officers, application of the tourniquet is similar to the use of a hobble. This existing level of familiarity reduces training time and aids in the effectiveness of the device.

Made in the USA

Tan Case Shown

Rescue Version

Advantages of the SOF[®] Tactical Tourniquet:

- 1 100% Effective. Proven to be 100% effective during US Army Institute of Surgical Research testing.
- 2 Simple application. The SOF[®]TT provides the necessary effectiveness with an unmatched level of simplicity to increase the overall effectiveness of the device. The SOF[®]TT is applied the same to an arm or leg. Unlike other tourniquets that require you to learn two methods of application and implement the proper method when under stress.
- 3 Durability. The SOF[®]TT is constructed of quality, high strength materials. The tourniquet handle is machined from a solid piece of aircraft aluminum and maintains its strength in extreme temperatures. The tri-rings are molded Acetyl, a high impact plastic that will also maintain its strength in extreme operating conditions.
- 4 Reliable. The SOF[®] Tactical Tourniquet is designed to reduce the chance of accidental release or mechanical failure. Unlike other materials including Velcro[®], the fastening system will perform when soiled, muddy, frozen, or wet.
- 5 Safety set screw prevents accidental release of pressure during tactical patient movement. The screw is not required to gain hemorrhage control, but it is recommended if the patient will be moved in a tactical environment.
- 6 Dual locking rings offer a back up locking system.

Available for purchase on GSA.

ONLINE***NOT FOR HUMAN USE***

The Simulation Training Tourniquet utilizes Integrated Traction Technology to maintain the tourniquet's position on tapered anatomy. Its function is identical to the standard SOF® Tactical Tourniquet, so minimal training is required. This product is not designed or intended for human use. Please contact us for purchasing information.

→ SIMULATION TRAINING TOURNIQUET

Part Number:SIMTT

**→ TACMED™ K9 TOURNIQUET**

Part Number:K9TQ-RO

NOT FOR HUMAN USE

The K9 Tourniquet has been engineered to work effectively on tapered anatomy, such as the leg of a K9, and is designed to be placed high on the limb. It has integrated traction technology that prevents the tourniquet from slipping down the animal's leg, which would result in a loss of compression. The slippage is amplified when the animal is started to be moved and extricated. Slippage is a common occurrence when tourniquets or pressure dressings designed for humans are used on such tapered anatomy. The K9 Tourniquet addresses these issues and does so with a quick application time.

The TacMed™ K9 Tourniquet is included in the TacMed™ K9 Handler Trauma Kit.

The **Olaes® Modular Bandage** is the newest generation of trauma bandages and is advantageous for all levels of care providers. Packed with features such as 3 meters of gauze, a removable occlusive plastic sheet behind the dressing pad, and a pressure bar that can also act as an eye cup, the advanced capabilities of the bandage are tucked neatly away and can be utilized if required or simply ignored. No hooks or clips to confuse or delay care. Velcro® 'Control' strips prevent the elastic roll from accidentally unraveling and secure the bandage throughout the application process.

Designed with direct input from some of the most experienced combat medics in the world, no detail has been left out. From the adhesive 'brakes' on the elastic bandage that prevent accidental unrolling, to the zig-zag packed gauze that easily feeds from the bandage, this is the most comprehensive feature packed bandage available without any added confusion. No other bandage offers so much versatility in such a small package. Cover minor wounds, apply truly effective pressure dressings, apply occlusive dressings, and have the ability to pack severe wounds with one bandage.

OLAES® MODULAR BANDAGE

Olaes® Modular Bandage - 4"

Part Number: OAL-4

NSN Number: 6510-01-558-3342

Olaes® Modular Bandage - 6"

Part Number: OAL-6

NSN Number: 6510-01-558-3443

Olaes® Modular Bandage - Flat Pack

Part Number: OALFP-4

Olaes® Modular Bandage features:

- 1 Latex Free.
- 2 Elastic wrap with built in 'Control Strips' to prevent inadvertent unraveling.
- 3 Three meters of sterile 4 ply gauze.
- 4 Plastic occlusive sheet included in dressing pocket. Transparent pressure cup that focuses pressure on the wound site and allows for visual inspection of uncontrolled hemorrhage.
- 5 Transparent pressure cup that focuses pressure on the wound site and allows for visual inspection of uncontrolled hemorrhage.

All options available for purchase on GSA.

AVAILABLE OPTIONS:

- ▶ 4" Inch Bandage
- ▶ 6" Inch Bandage
- ▶ Flat Pack

APPLICATION EFFICIENCY

During high stress situations, such as those involving casualties, stress effects on human performance often affect the fine motor skills of individuals. This makes simple tasks such as bandage application more difficult and time consuming. By creating a bandage where application involves only gross motor skills, no direction changes around hooks or bars, the Olaes® Modular Bandage significantly offers a simpler and more effective solution in bandage options. The elastic simply requires wrapping where the elastic stays flat instead of turning into a cord. Control of the elastic roll is maintained by the 'Control Strips' should the elastic be dropped. You no longer have to open or carry a package of gauze and a separate bandage as both are included in the same package.

A TRUE PRESSURE CUP

The unique pressure cup generates true focused pressure on top of the wound site where it is required, not circumferential pressure like an ineffective tourniquet. By generating this focused pressure, it helps occlude damaged vessels at the wound site where it is needed. It also reduces the amount of manual pressure required to be held, freeing up the care provider to treat other injuries or casualties. The pressure cup can also be removed and used as an eye cup for treatment of ocular injuries as recommended in the new TCCC guidelines.

ONLINE

The **Blast® Bandage** was designed to provide the ability to quickly package traumatic amputations, burns and large pattern wounds with minimal use of supplies and effort. The Blast® Bandage provides a 20" X 20" treatment area, but packs to about the size of a 4" combat bandage.

Our large non-adherent wound pad can be easily wrapped around limbs and secured with the attached elastic wrap. It provides a large sterile protective covering for shrapnel wounds or burns. With such a large coverage area the Blast® Bandage is big enough to cover the entire back or chest of most casualties.

BLAST® BANDAGE

Part Number: BLAST
NSN Number: 6510-01-586-4314

The **Blast® Bandage** also offers a removable occlusive layer that covers a 19"x 19" area, or can be used to cover abdominal contents minimizing the loss of heat and moisture.

As with our other bandages, the "brakes" on the bandage help prevent accidental unrolling of the elastic wrap during high stress application. These brakes are especially helpful during the dressing of amputations. By providing multiple points of adhesion, the brakes prevent slippage of the elastic during the wrapping process. This creates a more secure, effective bandage and decreases the chance of the wound being exposed during movement.

Available for purchase on GSA.

US PATENT: 7,663,015

Tactical Medical Solutions® designed the **Control™ Wrap** to make life a little easier when under stress. Just as in our Olaes® and Blast® bandages, we incorporate a series of brakes into each elastic bandage. These brakes prevent accidental un-rolling during application. The brakes also provide grip surfaces during the wrapping process and assist in maintaining the desired pressure and position of the bandage. This is extremely helpful when changing angles during the wrapping process or bandaging awkward injuries.

CONTROL™ WRAP

Control™ Wrap - 4"
Part Number: CW4
NSN Number:
6510-01-609-1057

Control™ Wrap - 4"
Box of 10
Part Number: CW4SC

Control™ Wrap - 6"
Part Number: CW6

Control™ Wrap - 6"
Box of 10
Part Number: CW6SC

By reducing the risk of accidental unrolling of the bandage, you minimize the following risks:

- 1 Contaminating a clean bandage.
- 2 Waste of a bandage due to contamination.
- 3 Lost time while managing loose ends.
- 4 Loss of pressure after applying the bandage due to shifting of material.

Individual Control Wraps available for purchase on GSA.

**AVAILABLE OPTIONS:**

- ▶ 4" Inch Bandage
- ▶ 6" Inch Bandage

QUIKLOT® PRODUCTS

QuikClot®
Combat Gauze™ Trainer
Part Number: CG-T

The Combat Gauze™ Moulage Trainer is designed to provide a gauze training aid for use during instructional scenarios. Ideal for treatment simulations and wound packing exercises utilizing artificial blood or other training aids, it is a completely inert training gauze (no hemostatic properties) that allows for proper instruction of the application of Combat Gauze. The Moulage Trainer comes in a resealable package that allows for multiple uses during exercises. Comes Z-folded.

Chitogauze
Part Number: CHITOXRPRO

ChitoGauze XR Pro is a hemostatic gauze dressing designed to control moderate to very severe hemorrhage. It features a radio-opaque strip making the dressing easy to identify during x-ray investigation. The XR Pro readily conforms to a wide range of wound profiles, allowing easy wound packing and rapid control of bleeding. The chitosan is impregnated through the dressing and specifically designed to limit particle shedding into the wound, unlike other currently available dressings.

Features:

- Hemostatic chitosan-impregnated gauze
- X-ray opaque strip
- Controls severe bleeding fast
- Gauze-like dressing that is flexible and conformable to tissue surfaces
- No powders or granules
- Safe and effective
- Z-folded in sterile package for ease of application
- Intuitive application
- Dimensions: 3" x 4 yards

QuikClot®
Combat Gauze™ LE
Part Number: CG-LE
NSN Number:
6510-01-562-3325

QuikClot® Combat Gauze LE provides the same level of performance as the military version in a compact Z-folded packaging and now features a radiopaque marker that can easily be detected by an X-ray. Combat Gauze LE is 3 inches by 4 yards of kaolin-impregnated gauze and is recommended as the primary hemostatic agent for all branches of the US military. Each pack of combat gauze is vacuum-sealed in an easy tear pouch for rapid access.

Only available for law enforcement or government officials within the USA. This product cannot be shipped to military addresses or military users.

Combat gauze LE is for Non Military purchasers only. This product cannot be shipped to military addresses or military users.

QuikClot®
EMS 4x4 Dressing
Part Number: QC-EMS

QuikClot® EMS 4x4 Dressing is a 4-ply, 4"x4", soft, white, nonwoven, hydrophilic gauze impregnated with kaolin, an inorganic mineral that is safe and effective in accelerating the body's natural clotting cascade without any exothermic reactions or use of animal or human proteins. Comes in an easy-to-tear pouch and packed 3 per clear poly bag.

QuikClot®
EMS Rolled Gauze
Part Number: QC-EMS-R

QuikClot® EMS Rolled Gauze is 3"x4" of soft, white, nonwoven, hydrophilic gauze impregnated with kaolin, an inorganic mineral that is safe and effective in accelerating the body's natural clotting cascade without any exothermic reactions or use of animal or human proteins. Comes packaged in an easy-to-tear pouch.

CELOX PRODUCTS

Celox-A
Part Number: CEL-A
NSN Number:
6510-01-623-9943

The innovative Celox applicator allows hemostatic access to the deepest of bleeders. Celox-A uses the same high-performance chitosan hemostatic agent as regular Celox, but places it in a syringe style applicator. The syringe can be inserted into wounds that would normally be inaccessible to standard hemostatics without surgical intervention. As the applicator's plunger is pressed, the agent is released into the wound. The agent can also be poured out of the syringe for application to non-penetrating trauma. This is an extremely versatile product with solid performance.

Celox is currently considered one of the top two hemostatic agents available according to a recent study conducted by the US Army Institute of Surgical Research.

Celox 15
Part Number: CEL15

Celox is currently considered one of the top two hemostatic agents available according to a recent study conducted by the US Army Institute of Surgical Research.

Its application is simple yet effective, and it has little effect on the surrounding tissue. If you are seeking a hemostatic agent for a kit or your organization, Celox is a great choice. This is a chitosan-based agent and is in granule form. Pour the granules in to the injury and apply pressure to stop bleeding. The granules form a plug, which stops most bleeding within one minute. For major hemorrhaging, maintain pressure for 3-5 minutes to ensure the bleeding is controlled.

Celox Rapid
Part Number: CEL-R
NSN Number:
6510-01-623-9903

Celox RAPID Z-Fold Gauze is an instinctive way of using Celox RAPID to stop mild to severe bleeding. Just pack the wound and apply pressure (as needed) - it's safe, easy, and very effective.

Celox Rapid Ribbon
Part Number: CEL-RIBBON

Celox Rapid Ribbon brings all the benefits of Celox Rapid Gauze in a 1-inch strip. The low-profile package allows Celox Rapid Ribbon to be easily concealed, and the reduced size makes it ideal for treating narrow entry wounds such as bullet, blast fragment, and stab injuries.

ESMARK BANDAGE

Part Number: ESMARK

The Esmark Bandage is a latex-free elastic bandage that is ideally suited for reinforcing pressure bandages. It packs small enough to fit in the UMK's outer pouches, and when coupled with a hemostatic bandage, it can be quite effective in achieving hemorrhage control. This is not a tourniquet and should not be used as one.

The **TACMED™ Surgical Airway Kit - Hard Case** includes the items essential to successfully establish and secure a surgical airway in any environment. All of the necessary components are packed neatly into a re-usable hard case that can double as a temporary sharps container or function as a drug box after the kit is used. The kit includes items such as the Tac Med Solutions™ innovative Trach Tool and the ultra-rugged Serpent® hook.

SURGICAL AIRWAY KIT - HARD CASE

Part Number: TSAK-HC
NSN Number: 6515-01-607-9809

Hard Case features:

The case was designed to minimize size while maintaining functionality. The case opens and lays flat creating a work surface while performing the procedure. The dimensions were based on a standard M-4 magazine pouch, allowing the kit to be stored in a pouch outside of the medics bag for rapid access.

All components are sterile and ready to use so no time is wasted opening several packages to complete the procedure.

Contents:

- 1x Hard Case
- 1x Trach-Tool
- 1x Trach Tube
- 1x Serpent® hook
- 1x Syringe 10CC
- 1x Mosquito Curved 5"
- 1x Alcohol Pad
- 1x Scalpel #10
- 1pr Nitrile Gloves XL

Dimensions:

5.5" x 2.75" x 1.25"

Available for purchase on GSA.

The **TACMED™ Surgical Airway Kit** provides the items essential to successfully establish and secure a surgical airway in any environment. All of the necessary components are neatly vacuum-packed for easy storage and maximum accessibility.

The **TacMed™ Trach Hook** uses a design that has been trusted by medical professionals for over 100 years. Based on the Jackson Tenaculum Hook Retractor, this scaled down version is perfect for the tactical health care provider.

→ **SURGICAL AIRWAY KIT**

→ Part Number: TSAK

Surgical Airway Kit
w/ Trach Hook
Part Number: TSAK-H

→ **TACMED™ TRACH HOOK**

→ Part Number: TMTH

Surgical Airway Kit features:

The **TacMed™ Airway Kit** provides the items essential to successfully establish and secure a surgical airway in any environment. All of the necessary components are neatly vacuum packed for easy storage and maximum accessibility.

Contents:

- 1x Tracheostomy Tube Cuffed size 6.0MM
- 1x #10 Disposable Scalpel
- 1x 3CC Syringe
- 1x Serpent® hook
- 1x Syringe 10CC
- 1x Alcohol Pad
- 2pr Nitrile Gloves

SURGICAL AIRWAY KIT with TRACH HOOK CONTENTS :

Same as above plus Trach Hook

Both options available for purchase on GSA.

By providing positive control of the trachea, this device greatly increases the success rate of Cricothyroidotomies in austere environments. The tapered design of the hook minimizes its profile at the incision site, providing the operator with the maximum level of visibility in low light and stressful situations. Its smooth edges also minimize damage to surrounding tissues when tension is applied.

Hook Length: 4 inches.

The **Tac Med Solutions™ Tracheal Tool** simplifies the process of performing surgical airways in the field by incorporating two key components in one compact, multi-function package.

The **Pocket BVM™ Bag Valve Mask** is a revolutionary, compact, device for manual resuscitation. The bag is quick to deploy, easy to operate and does not need to be manually inflated prior to use.

→ **TACMED™ TRACH TOOL**

Part Number: TMTT

→ **POCKET BVM™**

Part Number: PBVM

Design features:

The design allows the hook to act as a sharps container for the used blade, or it allows the user to rotate the blade creating a full length scalpel when greater control is required. This minimizes the risk of losing the blade when conducting the procedure in challenging environments that may require additional incisions. It also keeps all of the essential items in the work area, but out of the way.

When working in low light or confined space, this greatly contributes to reduced procedure time and increased effectiveness.

Trach Tool closed

Trach Tool open

Trach Tool scalpel being deployed

Available for purchase on GSA.

Features Include:

- 1 Includes bag, mask, patient valve, reservoir bag, and 2cm oxygen drive line.
- 2 Single use eliminates cross-contamination.
- 3 Requires minimum pressure for compression and quickly recovers shape.
- 4 Textured grip to prevent slippage.

POCKET BVM™ CONNECTIONS :

/ Gas inlet tube 15mm length x 6mm O.D.

Patient connector:

/ Outside - 22mm male
/ Inside - 15mm female

Expiratory connector (for PEEP valve attachment):

/ 30mm male

→ HALO CHEST SEAL

HALO Standard Version
Part Number: HALO
HALO XL
Part Number: HALO-XL

The **Halo Chest Seal** is an ultra-sticky hydro-gel occlusive dressing for treatment of penetrating chest trauma. Each pack includes two seals allowing for the treatment of entrance and exit wounds.

The **HALO XL** is a large occlusive dressing ideal for sealing large abdominal wounds and multiple chest wounds often associated with IED blasts. Utilizing the same super sticky hydrogel technology as the original HALO, this dressing is extremely effective and versatile.

Dimensions 8.5" x 12"

→ RUSSELL PNEUMOFIX

Part Number: PNEUMOFIX

The Russell PneumoFix® is a sterile chest decompression device designed for the management of tension pneumothorax, simple pneumothorax, and pleural effusion.

Designed by practicing clinicians who understand the limitations of conventional equipment, the Russell PneumoFix® has many features that make it a truly useful tool for the emergency care provider. For medical professionals, use of the Russell PneumoFix® is quick, simple, and intuitive.

Features:

- ▶ Unlike the intravenous cannula, used historically in an improvised way for the management of tension pneumothorax, the Russell PneumoFix® is designed specifically for this purpose.
- ▶ The Russell PneumoFix® has been designed to be inserted without the need for a scalpel or skin incision.
- ▶ The device incorporates a Veress-tipped needle to minimize risk of injury to lung tissue.
- ▶ 11cm long catheter – long enough to reach the pleural cavity of the vast majority of patients.
- ▶ Low pressure one-way valve to allow air and fluid out but nothing in.

→ FOX CHEST SEAL

Part Number: FCS

Fox Chest Seal has been tested in extreme conditions. It comes with two dressings in a compact package designed for IFAK-carry and is used for treating potentially lethal open chest wounds.

→ KING LT-D

Size 4
Part Number: KING LTD SZ4
NSN Number:
6515-01-515-0151

Size 5
Part Number: KING LTD SZ5
NSN Number:
6515-01-515-0161

The **KING LT-D** is a disposable supraglottic airway designed for positive pressure ventilation as well as for spontaneously breathing patients. Limiting factors such as the tactical environment (e.g., low-light conditions) and "skill-fade" may contraindicate the use of an endotracheal tube for securing the airway. Therefore, the King LT-D serves as an intermediate step between an NPA and a Surgical Airway (cric), as it is not always needed to proceed from the least to most invasive.

Please adhere to local medical protocols when using this product.

Available in two sizes:
Size 4 (5'-6')
Size 5 (6' or greater)

TACMED™ COMPLETE CHEST TUBE KIT

Heimlich Valve

Part Number: CCTK-HEIM

Cook Chest Drain Valve

Part Number: CCTK-COOK

The TacMed™ Complete Chest Tube Kit is designed for the tactical provider operating in a prolonged field care or austere environment. Two sub-kits help maintain efficiency and organization. The PREP Module contains all necessary components to prepare the site with the exception of a local anesthetic. The PROCEDURE Module has the option of a standard Heimlich Valve or compact Cook Chest Drain Valve based on the end user's preference. It also contains the highly flexible Beacon Chest Seal to aid in positive securing and occlusion of the chest tube. Please contact us for individual components or customization.

► To order a Complete Chest Tube Kit, please call us at 888-822-6331 to verify that you are a medically-licensed physician or that you are purchasing through a federal government agency or military unit. You must meet these requirements to order a CCTK.

SAM CHEST SEAL - COMBO PACK

Part Number: SCS-COMBO

The SAM Chest Seal Combo Pack includes one vented chest seal and one non-vented chest seal. This allows the responder to deal with both entry and exit wounds in cases of through-penetrating traumatic chest injuries. The valve allows air to flow out of the chest cavity at low resistance while preventing ingress and prevents internal blockage. The domed shape of the valve was designed to prevent obstruction of the air channels from items such as blankets, clothing, and body armor.

SAM CHEST SEAL W/ VALVE

Part Number: SCS

This valve version of the SAM Chest Seal is an occlusive dressing for open chest wounds that features a one-way valve when its cap is removed. The valve allows air to flow out of the chest cavity at low resistance while preventing ingress and prevents internal blockage. The dressing is occlusive with the cap in place.

→ RUSSELL CHEST SEAL™

Part Number: RCS

The **Russell Chest Seal™** arrives on the market with the test data and real-world feedback to back up its performance claims. The hydrogel-based dressing creates an airtight seal even when placed on a sweaty or hairy patient, and patient comfort is greatly increased due to the soft backing on the hydrogel seal.

At 7 ¾" x 6", the Russell Chest Seal™ is one of the largest chest seals currently available.

Features include:

- 1 Patented hydrogel base - sticks and stays stuck!.
- 2 4 large peripheral apertures allow drainage of air & blood.
- 3 Low profile and highly flexible.
- 4 Compact: easy to pack into medical kit.

→ BEACON™ CHEST SEAL

Part Number: BCS

The **Beacon™ Chest Seal** is an advanced occlusive dressing designed to treat open chest wounds. They are specifically designed with a medical grade hydrogel adhesive strong enough to adhere to skin that is exposed to blood, sweat, hair, sand or water.

Features include:

- 1 Large 6-Inch Round Shape for Optimal Coverage Area.
- 2 Effective in Extreme Cold and Heat.
- 3 Large Release Tab for Easy Application and Removal.
- 4 Transparent Backing for Easy Placement over the Wound.
- 5 Strong Medical Grade Hydrogel Adhesive.
- 6 Lightweight Puncture-Resistant Packaging.
- 7 Conforms and Adheres Easily to All Body Surfaces.

→ TACTICAL LARYNGOSCOPE SET

Part Number: LS-7

Patented handle with removable light source is durable, waterproof, and dustproof with textured grip. Accepts all standard green-spec fiber optic blades.

Contents:

7x Single-use, latex-free fiber optic blades
Mac sizes: #2, #3, #4
Miller sizes: #0, #1, #2, #3
Spare Lamp Module
2x AAA Batteries
Tough Cordura carrying case with elastic loops and extra pocket
Dimensions: 9" x 5" x 2.5"
Weight: 13 oz.

→ TPAK

Part Number: TPAK

The TPAK is a 14GA x 3.25" Angiocath to treat and relieve any pneumothorax.

→ SERPENT HOOK

Part Number: SH-2

Securing a casualty's airway is a critical task in any phase of medicine. The Serpent Hook is an ultra-compact, multi-use device used to secure ET tubes and numerous other items. Its design allows it to be easily passed under the patient even when wearing heavy-weight assault gloves. The Serpent Hook is Patent pending.

With a weight of 15oz, the **Phantom® litter** is an **ultra-light, ultra-compact, multi-use casualty evacuation platform** designed for medical operators or individual soldiers. The Phantom® allows the user to always have a means of moving a casualty without carrying bulky, overweight equipment.

PHANTOM® LITTER

Color/BLACK ●

Part Number: PHL-K, BK
NSN Number:
6530-01-600-7741

Color/TAN ●

Part Number: PHL-K, Tan

Color/GREEN ●

Part Number: PHL-K, G

Color/MULTI-CAM® ●

Part Number: PHL-K, MC

Litter Refill/ Part Number: PHL

Product features:

- 1 Packed Dimensions: 10" x 7" x 1 ½" thick
- 2 Litter dimensions: 65" x 23"
- 3 Weight: Internal mount: 15 oz
- 4 External mount: 19 oz
- 5 Weight Capacity: 450Lbs (204Kg)
- 6 The Phantom® Litter was tested with a 500lb (227Kg) static load for a 24-hour period without damage.
- 7 Grab points: 8
- 8 Securing strap: 1 ½" nylon webbing with friction buckle.

Made in the USA**All options, including the Litter Refill, are available for purchase on GSA.**

The Phantom® can be mounted directly to the individual combat equipment without taking space on the vest from other critical items such as magazines, radio pouches, or hydration systems. These items can be mounted over the litter carrier making it almost completely unnoticeable and without interfering with accessibility. The internal version was designed to fit inside of the Modular Body Armor Vest by Eagle, or the Plate Carrier with Cummerbund issued in the Special Forces associated with casualty evacuation platforms.

Not only does the litter function as a poleless litter, it also functions as a casualty equipment bag after the casualty has been loaded on a standard litter. The bag can hold an individual's combat equipment or sensitive items to minimize the risk of loss during the casualty evacuation process.

One of the most physically and mentally challenging situations an individual can face is casualty evacuation. Casualties must be moved quickly and safely. Every second wasted decreases the casualty's chance of a speedy recovery. The RTF Litter provides an effective casualty evacuation platform that is quick and easy to employ and compact enough to accompany individuals on an assault or long movement. The RTF Litter is small enough to attach to your kit or another bag, but is still functional in a combat or rescue environment. It provides a rapid means of casualty movement without compromising durability, flexibility, or the individual's ability to maneuver through the most demanding environments. Casualties can be dragged or carried off target without excess time spent rigging and securing. It also eliminates the wait time for a conventional litter to be brought from the breach point or a support vehicle.

RESCUE TASK FORCE LITTER

Part Number: RTFL

Product features:

- 1 Light and compact (5.2 lbs with carrier)
- 2 Improved plastic bed for longer product life when evacuating over rough terrain
- 3 Size allows movement of casualties through narrow passages and walkways such as on aircraft, buses, and trains
- 4 Casualties can be sat up to make tight turns on stairwells and hallways
- 5 Rapid deployment drag line already rigged to litter
- 6 Multiple grab points ease passage through tight areas
- 7 Quick secure straps, with larger buckles, making it easier to use when wearing rescue gloves.
- 8 Casualty is secure but accessible for reassessments and care
- 9 Can be dragged or carried

The **ARK™ Active Shooter Response Kit** provides individuals responding to active shooter situations with the equipment necessary to render aid and initiate evacuation of multiple casualties. The design of the bag and its contents allow responders to maximize the resources available on scene and does not hinder or slow down the assault or clearing process of the structure or incident area.

ARK™ [Active Shooter Response Kit]

Color/BLACK ●

Part Number: ARK-B

Color/TAN ●

Part Number: ARK-T

Color/ACU ●

Part Number: ARK-A

Color/GREEN ●

Part Number: ARK-G

Color/MULTI-CAM® ●

Part Number: ARK-MC

The contents of the ARK™ are designed to reduce the size of the required rescue force and significantly reduce the evacuation time of seriously injured casualties. By utilizing uninjured individuals on scene to provide stopgap treatment and mark casualty locations, rescue time can be greatly reduced and survivability rates increased. The ARK casualty throw kits contain basic treatment material and simple bi-lingual instructions for providing initial treatment. By controlling life threatening hemorrhage and positioning the casualty in a manner that maintains the airway, significant time can be gained in the rescue effort.

With multiple storage compartments the ARK is not only for basic treatment. Medics moving with the clearing element can distribute the throw kits as needed while maintaining more advanced equipment in the side pockets for treatment of teammates if necessary.

ARK™ Dimensions-
23" L x 15" W x 7.5" D

All options, including the ARK Throw Kit, are available for purchase on GSA with the exception of OD Green.

The ARK™ Contents List:

2x SOF® Tactical Tourniquet - Wide
 2x Olaes® 4" bandage
 2x Olaes® 6" bandage
 1x Blast® bandage
 7x Cravat
 2x Splint
 2x 28F NPA with lube
 1x TacMed™ Surgical Airway Kit with Hook
 2x 14GA x 3.25" Decompression Needle
 2x Halo Chest Seal (4 Halo Seals)
 2x Petrolatum Gauze

2x 2" surgical tape
 1x Trauma Shears 7.5"
 5x Pairs of Gloves
 1x Helios® System with active warming
 5x Tac Med Solutions™ Combat Casualty Tag

7 ARK™ Throw Kits, each containing the following:

1x SOF® Tactical Tourniquet - Wide
 1x Control™ wrap 4"
 1x Krinkle gauze

1x Emergency blanket
 1x Bi-lingual instruction card
 1x Casualty marker panel

The **Downed Officer Kit (DOK)** is a compact kit that contains the items essential for treatment of serious injuries encountered by law enforcement and military personnel. The DOK is compact enough to fit in a cargo pocket or glove box. It can also mount to a roll bar/ protective shield in a patrol car or tactical vehicle.

The DOK is packed in a heavy weight re-sealable bag allowing easy replacement of individual kit items. Kit components can also be periodically inspected without damaging the integrity of the packaging. The kit contents can be modified to meet your individual requirements or several pre-packed kits are available with or without hemostatic agents.

When an individual is involved in a shooting it is essential that they have the necessary items to render aid to themselves or to the suspect. The Tactical Medical Solutions® **Ballistic Response Pack** contains the components necessary for a first responder to provide treatment to ballistic injuries as well as other types of trauma associated with combat operations.

This compact, one hand accessible, MOLLE adaptable pouch is ideal for storage on individual equipment or inside a vehicle. Its contents were selected for ease of use and effectiveness.

All options available for purchase on GSA.

Operator IFAK Real Stories:

Range safety red came from a suggestion by the writers at Pistol-training.com. They wanted an easily identifiable med kit to keep on the outside of their range bags so they can quickly deal with situations like this.

Training can turn into a real world emergency in the blink of an eye. Be prepared.

The photograph on this page is an example of the difficulties in improvising a tourniquet when a wound is severe enough to require one. As the gentleman pictured noted in an email to us, "... [he] received life-threatening injuries to both upper legs as the result of another shooter's accidental discharge of his weapon. The .30-06 bullet caused very serious injuries to both legs, but the most critical injury was the severing of my left popliteal artery (the largest artery behind the knee)..."

To repeat, this injury is secondary to a weapon not being cleared on a range, not a battlefield wound nor a deliberate attempt on his life by a suspect. As you can see, initial attempts to stop the bleeding with a belt were unsuccessful, as illustrated by the ground saturated with blood. Luckily, the Range Master had a kit that contained a SOFTT, which was applied quickly and saved his life.

The **TacMed™ Adaptive First Aid Kit, or AFAK**, is a compact kit that provides the individual soldier or law enforcement officer with the necessary lifesaving equipment to effectively treat injuries commonly associated with combat trauma. The innovative design of the pouch and included tourniquet strap allow for the kit to be mounted either vertically or horizontally to any MOLLE surface, allowing the user to take advantage of unused space and prioritize individual equipment layout. The AFAK can also be adapted to a MOLLE belt for operators that require a self-aid capability when not utilizing a body armor system. The removable insert and optional lanyard allow for “small of the back” placement with positive retention of the kit. An additional MOLLE platform on the exterior of the pouch aids in maximizing available space for user equipment preference. The included tourniquet strap system is also fully adaptive for vertical and horizontal placement based on user preference for access with both hands.

The **TacMed™ Field Blood Transfusion Kit** provides the medic with a compact, streamlined and complete solution to the challenge of facilitating a life-saving blood transfusion in a tactical environment. Designed at the request of Special Operations medics, the separate Donor and Recipient modules allow the medic to rapidly and decisively collect and transfuse whole blood systematically, without creating a security risk or delaying treatment from excess time wasted sorting through bulky, unnecessary medical components. For convenience and user preference, the kit is offered in a compact MOLLE-compatible pouch, or in a re-sealable heavy weight plastic bag. Either configuration is available with the optional 250ml bag of 0.9% NaCl for a complete transfusion-ready system.

FIELD BLOOD TRANSFUSION KIT [FBTK]

Color/BLACK ●

The TacMed™ **Emergency Trauma Station** brings proven life-saving medical supplies and instructions together with the most crucial part of an emergency response: the first responder. Seven throw kits are contained within a bright red kit bag that is clearly labeled “TRAUMA”, along with two Ultra-light poleless litter systems to aid first responders and rescuers with the extrication of the critically wounded. The wall-mounted steel case is alarmed, low profile, and has the capability to be hardwired into a building’s existing alarm system so that others may be alerted. The Emergency Trauma Station is ideally suited for high traffic areas, so that it is readily available for public access.

Seven (7) throw kits are contained within a bright red kit bag that is clearly labeled “TRAUMA”. Also found in the trauma bag are two (2) Ultra-light poleless litter systems to aid first responders and rescuers with the extrication of the critically wounded. The entire system resides in a wall-mounted steel cabinet, similar to an AED cabinet that is also clearly marked “TRAUMA KIT”. The case is alarmed, low profile, and has the capability to be hardwired into a building’s existing alarm system so that others may also be alerted. The Emergency Trauma Station is ideally suited for high traffic areas, so that it is readily available for public access.

EMERGENCY TRAUMA STATION [ETS]

Complete Kit
Part Number: ETS

Throw Kit
Part Number: ETS-CTK

Here at Tac Med Solutions™, we understand that being an untrained provider doesn't diminish the first responder's willingness to help those in need. Because of this, each ETS Throw Kit contains illustrated instructions that take the user through step-by-step procedures to ensure proper care and device application based on what they observe for injuries. The instructions are brightly colored for easy identification and laminated to resist deterioration from training, familiarization, or use in actual emergencies. The throw kits themselves

are also contained in a heavy weight re-sealable bag for ease of contents inventory, training, or inspection. Each throw kit contains a rescue orange SOFTT-Wide tourniquet, making its application readily apparent to additional first responders and medical professionals. Also included is the OLAES Modular Bandage, petrolatum gauze, or an optional set of chest seals, tape board, gloves, emergency blanket, and a brightly colored

1'x1' casualty marking card to alert rescuers that there is a victim behind closed doors.

ETS Contents:

- Cabinet Trauma Bag**
- 2x Ultra-light poleless litters**
- 7x Throw Kits**

Dimensions: 7" W x 7" L x 3" thick

Each Throw Kit contains:

- 1x SOF®TT-W-R
- 1x 4" OLAES® Modular Bandage
- 1x Petrolatum Gauze
- 1x Tape Board
- 1x Emergency Blanket
- 1x Casualty Marking Card
- 1x High-Resolution Instructional Card

The petrolatum gauze may be substituted for chest seals.

Please call us at 888-822-6331 if you are interested in kit customization.

Truly adaptable and ready for any mission, the **AMP (Any Mission Pack)** derives its name from its ability to be modified to fit any mission. It offers a completely customizable interior, multiple methods of wear, and the ability to scale the pack size up or down depending on mission requirements.

The approximately 1150 cubic inch interior main pack is fully coated with loop-tape allowing the end user to arrange the included loop sets and pouches in a configuration that meets their needs. The sets included are: **18 Loop sets, 3 zippered mesh pouches, 1 gloves pouch (holds 10 pairs of gloves), Surgical set insert.** Both back pack straps and equipment attachment straps are included for wear of the pack.

Two Packs in One.

→ We know that for many of you medicine is only half of your job. If you're not treating casualties, you're engaging the enemy. The TacMed™ Tactical EMS (TEMS) Pouch was designed to make you a more effective combatant and a more effective care provider.

The pouch saves real estate on your vest by integrating a three-magazine panel with a medical pouch. Magazines are retained by elastic keepers in pouches that will accommodate standard M-4 magazines as well as PMAG's. Treatment material is well-organized and easily accessible in the medical pouch. The distance the pouch opens can be adjusted by the end-user, and the adjustable cord allows for rapid closure of the pouch when needed.

→ Your mission is to protect, but unforeseen circumstances may arise that force you into a first responder role. When this happens, the **Ankle Medical Kit** provides you with the basic equipment needed to treat a casualty until higher level medical care is available. The AMK is the perfect solution for individuals who are tasked with protection and wear a uniform that does not permit carrying a standard medical kit. Designed to carry a SOF® Tactical Tourniquet- Wide, the Russell® Chest Seal, and a hemostatic agent or standard gauze, the AMK disappears in the pleat of slacks and most other uniform bottoms.

The AMK's security and comfort allow it to be worn for long periods of time. The material is soft and flexible, but secure enough to allow rapid movement without losing the kit or its contents. The ankle wrap that secures the components extends to become a compression wrap once the other life saving products have been utilized. The AMK is a major leap in medical capabilities for individuals serving in personal protection rolls or positions requiring the wear of a non standard uniform.

The **Pocket Medical Kit** provides the individual Law Enforcement Officer or concerned citizen with the necessary medical equipment to immediately treat life threatening traumatic injuries. The SOF®TT-Wide included in the kit is rescue orange, making its application readily apparent for additional First Responders. Also included are compressed gauze and an Esmark Bandage, which provide a wound packing and pressure dressing capability, in addition to the Beacon™ Chest Seal for treatment of any penetrating trauma. The PMK is designed to fit neatly into the chest pocket of a duty shirt, trauma plate pouch of a concealed armor carrier or the back pocket of your jeans. So whether you wear a traditional uniform, external carrier system or civilian clothes, you can be prepared and have the confidence of having a combat proven tourniquet for any emergency situation.

TACMED™ POCKET MEDICAL KIT

PMK w/ Compressed Gauze
Part Number: PMK

PMK w/ Combat Gauze LE
Part Number: PMK-LE

Contents:

- 1x SOF® Tactical Tourniquet- Wide in Rescue Orange
- 1x Esmark Bandage
- 1x Compressed Gauze
- 1x Beacon™ Chest Seal
- 1pr BlackGloves

Both options available for purchase on GSA.

Designed to the specifications of the Los Angeles Police Department, the **TacMed™ LAPD Kit** was created for use by all Los Angeles County Law Enforcement Agencies. It provides the law enforcement officer with maximum flexibility while providing on target care. Worn on the leg, the pouch attaches directly to the officer's belt or to a tourniquet pouch worn on the belt. When worn with the tourniquet pouch, the detachable lower portion of the kit provides for additional medical capabilities if the situation dictates, while having the tourniquet available for instant access on the officer's belt. The pouch is available with two options: a 1.5"-wide non-adjustable length drop leg strap or a 2"-wide adjustable length drop leg strap with a black D ring on it. The D ring provides a rapid attaching point in an emergency to a key clip or belt keeper. This pouch is offered stocked based on different levels of medical capabilities. All kits can also be custom packed to meet your specific mission requirements. Tourniquet pouch sold separately.

LAPD KIT

- 1x Combat Casualty Card

Dimensions: 9" x 7" x 3"

Weight: 24oz.

Made in the USA

In 2014, the Los Angeles Police Department equipped its officers with 8,000 of these tactical first aid kits. A 15-year upgrade for the LAPD, all officers received training as well to be able to use the combat-style trauma kits to provide potentially life-saving medical treatment to victims. More information on the LAPD's decision to equip its officers with this type of medical kit and the importance they serve, including successes the LAPD has had with these kits, can be found at the following:

As the practice of pushing medical personnel into the “warm zone” of a mass casualty scenario becomes more prominent, so has the need to equip these medics with the right tools for this challenging task. The **Warm Zone Bag** from Tactical Medical Solutions® is designed for quick and efficient treatment and triage of victims in a mass casualty scenario. It can be worn around the waist, slung over the shoulder for rapid movement, or attached to a panel via the MOLLE attaching straps. The Warm Zone bag utilizes an adjustable draw bridge system that allows the user to control how far the front flap opens, allowing easy access to the bag's complete contents. The interior of the bag is completely modular, allowing the user to adjust supplies based on their specific preferences.

The TacMed™ Uniformed Medical Kit (UMK) 2nd Generation builds upon the success of the first generation UMK. The UMK 2nd Generation greatly decreases the signature of the device over the original by moving the medical gear and pockets behind a flat panel, eliminating any imprinting under the officer's duty shirt. In addition, the UMK 2nd Gen increases comfort and durability as it reduces the thickness of the device with a new material that stretches to the shape of the officer's vest. The new design allows the UMK 2nd Gen to fit ANY concealed body armor carrier that utilizes hook and loop straps, plus the sides can be trimmed for a custom fit. The UMK 2nd Generation is designed to carry the SOF® Tactical Tourniquet-Wide with additional pockets designed to carry a set of chest seals, hemostatic agent, and the Esmark Bandage.

TACMED™ UNIFORMED MEDICAL KIT - 2ND GENERATION

Color/BLACK ●
w/Built-in Bridge
Part Number: UMKB

Color/BLACK ●
w/Built-in Bridge &
SOF®TT-W
Part Number: UMKB-W

Features:

- *** New design adapts the device to fit a wide variety of body types
- *** New design features an even lower profile... No imprinting under the officer's duty shirt!
- 1 Central placement provides the officer instant ambidextrous access to their medical kit.
- 2 Allows the uniformed officer to carry a complete medical kit on them at all times.
- 3 Creates instant recognition among officers of the placement of medical gear.
- 4 Instant access to trauma gear saves precious time, allowing the officer to provide self-aid and responding officers to provide buddy-aid in the case of a serious injury.
- 5 Combat Gauze and Esmark Bandage sold separately.

→ The TacMed™ K9 Handler Trauma Kit provides the K9 Team with the necessary components to treat life-threatening injuries for law enforcement or military applications. The kit contains dual purpose items that can be used to treat injuries to both the handler and K9. In addition, the kit provides the unique capability to effectively address traumatic injuries for the K9 operating in a tactical environment, away from veterinary care. The K9 Handler Trauma Kit contains specific items intended solely for the treatment of an injured working dog, such as a K9 tourniquet, muzzle, endotracheal tube and 14ga decompression needles to address torsion and bloat.

Whether you are a law enforcement officer on patrol or an EMS professional responding to a critical incident, the TacMed™ Patrol Trauma Response Pouch will provide you with the necessary components for on-scene care when seconds count. Designed to be worn on the belt or a MOLLE platform, this compact kit takes up minimal space and locates critical equipment on the provider where it is most needed. The PTRP can be a stand-alone pouch, or with the optional pouch-attaching strap, it can be scaled up to accept either the LAPD Kit, Patrol Rifle Response Pouch, or standard Drop Leg Pouch. The PTRP has a divider to keep the SOF® Tactical Tourniquet Wide separate from the Esmark Bandage, compressed gauze, and Fox Chest Seal. There is also individual storage for one pair of gloves.

- 1PR Gloves

Pouch-Attaching Strap sold separately.

Storage of essential equipment is a challenge for patrol officers or individuals working low-vis or plain-clothed operations. The TacMed™ Tourniquet Ankle Holster allows the operator/officer to comfortably and discreetly wear a SOF® Tactical Tourniquet on either leg in virtually any mode of dress. Positioning the tourniquet on the ankle allows rapid access with either hand in the event of a shooting. The design of the holster allows the tourniquet to be removed from the pouch in seconds with one hand, yet is secure enough to run with and not risk the tourniquet falling out of the holster.

TACMED™ TOURNIQUET ANKLE HOLSTER

As today's law enforcement community continues to increase preparedness towards critical incident response, the need for equipping those responding officers has risen as well. The Patrol Rifle Response Kit offers the individual patrol officer the ability to have the necessary components for those emergency situations immediately available to them, without the added difficulty of performing reloads from an uncooperative sling bag. Internally, the contents allow for the effective treatment of life threatening wounds, while externally, the pouch can hold (2) 30 round M4/AR15 style magazines and has MOLLE-attaching surface on the face to allow for the addition of equipment. The system can be worn full-time or detached from the duty belt using the integrated buckles and quickly snapped on during times of crisis. It is also fully compatible with our Patrol Trauma Response Pouch and select belt-mounted tourniquet holders. (Sold separately)

The Remix Pro is powered by a single CR123 battery providing excellent performance in cold weather. It is lightweight and compact. While having multiple output modes to meet various requirements, the light always starts in low mode. Combining these features with a large on/off button, an easy access battery door, and a reliable asymmetrical bracket, The Remix Pro is an extremely versatile light ready for any environment.

- LED colors:** White/Blue
- Body colors:** Tan/Black Multi-Cam®
- Mounting options:** Standard headlamp/MOLLE mount/NOD'S mount/Rhino bracket helmet mount

- Specifications Power:** 70 Lumens
- Lamp:** 3 Ultrabright LEDs, 1 Maxbright
- LED Burn Time:** 40 Hours
- Batteries:** CR123
- Weight:** 66 Grams
- UL Rating:** Approved

→ **GEAR KEEPER**

Part Number: TSRET

Built for the MOLLE system, the Gear Keeper allows the user to tether gear in a way that allows full accessibility while preventing loss. Select appropriate force based on gear weight to retract and hold gear. The Velcro® strap securely fastens to the MOLLE system, allowing the Gear Keeper to pivot in any direction when needed.

PIRANHA SHEARS

Size: 5.5"

Part Number: PIRANHA5

Size: 7.25"

Part Number: PIRANHA7

TyTek Medical's Piranha Trauma Shears were engineered to meet and exceed the military's stringent standards. They can cut through the tough material such as web gear, denim, leather, boots, and heavy winter clothing. They can also cut the softest materials such as gauze, which is where traditional trauma shears fail.

Features:

- 1 Premium-grade, durable stainless steel tactical shears blades for precision sharpness.
- 2 Reinforced, serrated edge for maximum cutting ability through the toughest materials.
- 3 Clothing-lift lip and rounded tip for patient safety.
- 4 Ergonomic inlayed rubber grip and contoured handles for maximum comfort and control.

DISPOSABLE SCALPEL

#10

Part Number: SCAL10

#11

Part Number: SCAL11

This disposable scalpel has a retractable sheath to protect the blade and the provider before and after use.

Available pre-loaded with either a #10 or #11 blade.

SURGICAL TAPE

Part Number: TAPE-2"

Easy to tear surgical tape is something you just can't have enough of.

2 inch tape that comes in a 30 foot roll.

TAPE BOARD

Part Number: SURG TAPE BOARD

Options:

- Tape Board with Surgical 2" Tape - 5 feet.
- Tape Board with Duct Tape - 5 feet.

NPA 28F WITH LUBE

Part Number: NPA
NSN Number: 6515-01-444-5416

The NPA is the airway adjunct of choice for the tactical environment.

This 28F PVC nasal airway includes surgical lubricant.

PETROLATUM GAUZE

Part Number: PETGA
NSN Number: 6510-00-202-0800

Excellent for occlusive dressings and other wound care.
1 Size: 3" x 9".
2 Sterile.

ADSAFE FACE SHIELD

Part Number: ADFS

Protect yourself while helping others. This ultra-compact face shield is about the size of an alcohol wipe and fits easily into virtually any kit.

TRAUMA SHEARS

Size: 5.5" Part Number: TS5
Size: 7.25" Part Number: TS7

Stainless steel 5.5" or 7.25" trauma shears with standard silver blades so you can see them when you drop them.

MOSQUITO FORCEPS

Part Number: MOS

Stainless steel 5" curved Halsted mosquito forceps.

Z-PAK GAUZE

Part Number: ZPAK

The **Z-Pak Dressing** is ideal wound packing cotton gauze. It is Z-folded to allow for fast, easy and clean extraction from the protective packaging while packing into a wound. The dressing is sterile, lint free and is vacuum sealed in a 2mm outer pack for greater durability.

KRINKLE GAUZE

Part Number: KGR

4" x 4.1 yards of sterile fluffed Krinkle gauze for treatment of various wounds.

COTTON TRIANGULAR BANDAGE

Part Number: CRVT

These high-strength synthetic cravats are one of the most useful items in an aid bag. Use for splinting, bandaging, and many other tasks. Includes two safety pins, one of our other favorite multi-use medical items.

EMERGENCY BLANKET

Part Number: EMERG-B

Heat reflective blanket measuring 84" x 52". Great for keeping casualties warm or to pack in a go bag. When you don't have the space for a Helios®, this is your best bet.

→ The IV Evaporative Cooling System (IVECS™) was developed to prevent IV fluids from reaching excessively hot and potentially dangerous temperatures. Hot fluids are counter-productive when treating heat casualties. When operating in a desert or any low humidity hot environment, this becomes a serious concern.

The IVECS' efficient design maintains fluids at a safe temperature for up to 18 hours without additional cooling assistance. The cooling systems are cost effective and re-usable. They can easily be converted to a pressure infuser with the addition of a standard blood pressure cuff. It will accommodate both 500ml and 1000ml bags. The IVECS™ provides an effective, power free means of delivering IV fluids at a safe temperature under adverse conditions and in harsh climates.

**IVECS**

Part Number: IVECS

NSN Number: 6515-01-530-7024

HOW DOES IT WORK?

The IVECS™ does not need to be cooled prior to inserting the IV bag. The only step required is to soak the pouch for approximately 15 minutes. It is not like a cold pack that absorbs or transfers heat energy from one mass to another to cool. The pouch cools through the method of evaporation. The temperature is controlled by the movement of water in the form of gas traveling over the surface area of the IV bag. While the circulation of air around the bag is important to allow maximum efficiency, it is not required.

The IVECS™ is an essential piece of equipment for any care provider operating in extreme conditions.

Available for purchase on GSA.

According to guidelines established by the leading authority on patient care and safety in the US, fluids stored at ambient temperatures in Iraq, Afghanistan, and other desert areas around the world are not maintained at a safe temperature. The average daily temperatures in these areas can be in excess of 54° C (130° F). Other studies indicate that the administration of fluids at temperatures exceeding 52.2° C (126° F) can damage tissue and blood cells. While forward surgical units, combat support hospitals, and vehicle-based health care providers have the ability to store fluids at safe temperatures, the combat medic or wilderness medical provider do not.

Recent reports from Iraq have shown the IVECS™ to maintain fluids at temperatures well below the established maximum. One soldier reported a temperature of 35.5 C (96° F). This demonstrates the impact of the addition of a light breeze and occasional shade, which make the IVECS™ even more effective.

Tests conducted by USAMRMC (US Army Medical Research & Materiel Command) proved the IVECS™ is effective in extremely harsh, unrealistic conditions. The bag was tested over a period of 13.5 hours at a temperature of 54° C (130° F) and a maximum of 5% humidity with no wind. The chart below displays the results of the test.

Within 2.5 hours, the control bag was already at an ambient temperature of 54° C (130° F). The bag stored in the IVECS™ was only 43.3° C (110° F) and then began a very slow climb to a maximum temperature of 50° C (122° F), four degrees below the maximum recommended temperature for blood products and fluids.

→ SALINE LOCK KIT

→ Part Number: SLK

The Tac Med Solutions™ Saline Lock Kit provides all of the items necessary to emplace a saline lock.

Contents:

- 1x IV Tourniquet (latex-free)
- 2x Alcohol Pads
- 2x IV Catheter 18 x 1 1/4"
- 1x Adapter- Smartsite (saline lock)
- 1x Tegaderm
- 2x Gauze 2x2
- 1x Linebacker IV Securing Device
- 1x 10ml Saline Syringe

Available for purchase on GSA.

→ VASCULAR ACCESS KIT

→ Part Number: VAK

The Tac Med Solutions™ Vascular Access Kit provides all of the items necessary to gain vascular access and administer IV fluids, except for the fluids.

Contents:

- 1x IV Tourniquet (latex-free)
- 2x Alcohol Pads
- 2x IV Catheter 18 x 1 1/4"
- 1x Adapter- Smartsite (saline lock)
- 1x Tegaderm
- 2x Gauze 2x2
- 1x Linebacker IV securing device
- 1x Admin Set 15 Drip
- 1x Hypodermic Needle (18G x 1.5in.)

Available for purchase on GSA.

→ The TacMed™ Combat Casualty Tag is one of the most effective and easy-to-use casualty marking/information cards available. Despite the cards small size, the casualty diagrams are clear and easy-to-use. The check-box system minimizes the amount of writing required, while highlighting critical interventions and injuries. The cards also provide patient and equipment tracking abilities. The CCT card is printed on waterproof tear-resistant paper to withstand the elements and body fluids.

→ **COMBAT CASUALTY CARD**

→ Part Number: CCT CARD

CCT Features:

Despite the cards small size, the casualty diagrams are clear and easy to use. The check-box system minimizes the amount of writing required, while highlighting critical interventions and injuries. The cards also provide patient and equipment tracking abilities. The CCT card is printed on waterproof tear-resistant paper to withstand the elements and body fluids.

The CCT is available in packs of 10.

→ **BP CUFF**

→ Part Number: BP CUFF

Simple, Durable, Accurate. You don't need complications when performing an assessment so sometimes the basics are the best.

→ **ADSCOPE**

STETHOSCOPE ONLY w/ BP CUFF
Part Number: SCOPE Part Number: SCOPE-BP

One of the most popular acoustic scopes, the Adscope 603, combines outstanding acoustic performance with rugged durability.

The 603 series features:

- 1 Combination diaphragm/bell chestpiece precisely machined to exacting tolerances from surgical stainless steel for outstanding performance and rugged durability.
- 2 Extra large bell (1 3/8 diameter) for unsurpassed low frequency response.
- 3 Ultra-sensitive diaphragm (1 7/8 diameter) for greater amplification and crisper high frequency response.
- 4 Non-chill bell and diaphragm retaining rims for patient comfort.
