NEW APPROACH IN BODY PROTECTION

“A SIMPLE BELIEF THAT PROTECTION & MANEUVERABILITY SHOULDN'T BE SUBSTITUTES”.

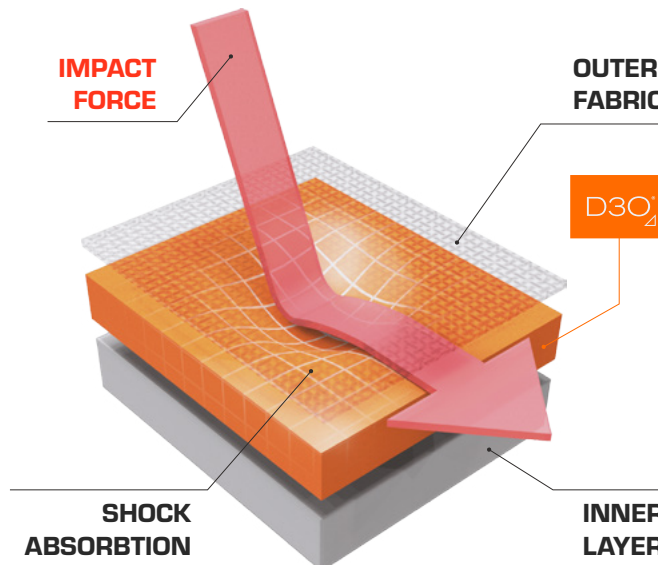

Rather than the traditionally rigid and bulky body protective solutions, XION® designs and produces flexible impact protective base layers.

XION® base layers protect against blunt trauma impact and issued with D30's ground-breaking impact technology. Tested and proven to be ahead of its competition.

XION's body protective solutions are designed & developed from the perspective of the end-user. We believe in the simplicity where “Form follows functionality”. High performance materials ensure top-notch quality.

PROTECTED BY D30®

XION® products are powered with and protected by D30's ground breaking impact protection technology. D30® is a pioneer in the development of shock absorbing 'smart materials'. They are exceptional in achieving the highest protection while retaining optimal flexibility.

D30's unique patented technology is based on non-Newtonian principles. In standard conditions, the molecules flow freely allowing the material to remain soft and flexible. On impact, the molecules lock together to absorb impact energy and reduce the force transmitted. The molecules instantly return to their flexible state after impact.

The raw material is strain rate sensitive meaning; the harder the impact, the more the molecules react, the better it protects. One of the great features of D30® compared to many other impact absorbing products in the market, is the 100% repeat function.

XION® Protective Gear was amongst the first to implement the patented D30® impact technology into their body protective garments.
