

RATIS™ INFLATABLE LPU (MD1500 / MD1501 / MD1502)

FOR SPECIAL OPERATIONS FORCES

Following five years of extensive collaborative research and development, Mustang Survival's newest inflatable is the smallest self-righting inflatable PFD for maritime special operations on the market. Using advanced inflator technology co-developed with Hammar®, our exclusive new programmable automatic inflator offers ultimate control: the user can switch between inflation settings triggered by depth, time submerged in water, or a combination of both. The LPU will also be available in our standard HIT™ inflator, and new manual inflation system.

Almost invisible low-profile design allows full field of vision and head mobility without interfering with equipment.

The exclusive Programmable Automatic Inflator is triggered by water depth, time submerged in water, or a combination of both.

Easily connects to almost any armor carrier.

Weighing 1.2 lb., it is the smallest self-righting inflatable PFD for maritime special operations, providing 40 lbs of buoyancy.

Harness accessory allows device to be used as a stand-alone life vest with no armor carrier.
